FOR IMMEDIATE RELEASE

FOLEY CATHETER HOLDER

ADHESIVE PATCH FEATURES DUAL LOCKING TAB

A brand new Foley catheter holder for short-term patient use, in addition to their leg band style holder for long-term catheterization, is being introduced by Dale Medical Products, Inc. of Plainville, Massachusetts.

The Dale Hold-n-Place™ Foley Catheter Holder is an adhesive patch which has a clear, skin-friendly base and a locking tab that features a dual holding system of adhesive and hook-and-loop to secure the indwelling catheter. Stabilizing the catheter to prevent movement and dislodgment helps reduce the likelihood of meatal irritation, bladder spasms and urethral erosion. The re-sealable system allows the catheter to be repositioned multiple times.

Designed for short-term application, the Dale Hold-n-Place™ Foley Catheter Holder's adhesive latex-free patch is clear and breathable. The center locking tab can be secured at the "Y" port or on the drainage tube itself, and creates a low-profile that keeps the tube close to the patient. For long-term catheterization, the firm's leg band holder is soft, stretches without narrowing to avoid the tourniquet affect and meets WOCN guidelines.

The Dale Hold-n-Place™ Foley Catheter Holder sells for approx. \$3.25 ea., individually packaged; 50 to a box. Samples and literature are available.
